Profile

I am a final-year student at School of Electrical and Computer Engineering, New Computer Technologies basic applied studies and I am interested in learning to develop optimized web applications that are meaningful. I am looking for an internship that aligns with my goals and provides me with a quality environment where I can learn and build on my knowledge.

Education

The School of Electrical and Computer Engineering,
New Computer Technologies,
Belgrade

2020 – Ongoing

Projects

M-Vet Veterinary
mvvet.rs/

Client Project

Redesigned outdated website in Figma for veterinary clinic. Implemented design using Webflow page builder and hosted it with the client's domain name. The resulting website is still in use by the clinic.

Vintage Video Club
github.com/ilicdj/vintage-video-club/

School Project

Developed website for a video club. Implemented registration and login system using PHP and MySQL, along with basic CRUD operations, enabling members to easily reserve movies online.

Road Trip Planner
road-trip-planner1.netlify.app/

Personal Project

Created a simple road trip planner in React and utilized Bootstrap and React Three Fiber for styling. The application consists of an interactive packing list to assist trip planning.

Skills

HTML, CSS, JavaScript	jQuery
ReactJS(familiar)	Bootstrap, Sass
PHP	Webflow
MySQL	

Languages

Serbian(native), English(fluent)
